

DRK-12 Research and Development:
Disruptive innovations, evolutionary improvements
... or both?

2012 Discovery Research K-12
Principal Investigators Meeting

Joan Ferrini-Mundy
Assistant Director, NSF
Directorate for Education and Human Resources (EHR)
June 14, 2012

A few things to think about:

1. Science and NSF
2. Why does NSF fund education?
3. What's next?

1. SCIENCE AND NSF

Vannevar Bush:
**Science—
The Endless
Frontier**

National Science Foundation
40th Anniversary
1950-1990

The NSF Mission:

To promote the progress of science; to advance the national health, prosperity, and welfare; to secure the national defense. . .

New Era of Science

Era of Observation
(Theory, experiment,
computation, “citizen
science”)

Era of Data and
Communications

Science, Engineering, and Education for Sustainability (SEES)

Creating new knowledge for a clean energy
economy and sustainable future

Cyber-enabled Materials, Manufacturing, and Smart Systems (CEMMSS)

Creating smart systems that sense, respond and adapt to the environment

Cyberinfrastructure Framework for 21st Century Science and Engineering (CIF21)

Addressing grand challenges in computing, computational modeling and simulation, and big data

Scientists are:

- Collaborating across vastly different disciplines on compelling problems
- Inventing and using computational techniques and algorithms to deal with massive data sets
- Building and using infrastructure and instruments to gather new data
- Accessing more data than they can possibly analyze in a lifetime, using shared datasets
- Networking around the globe in orchestrated ways to solve specific problems
- Formulating new problems that could not have been approached without current technologies

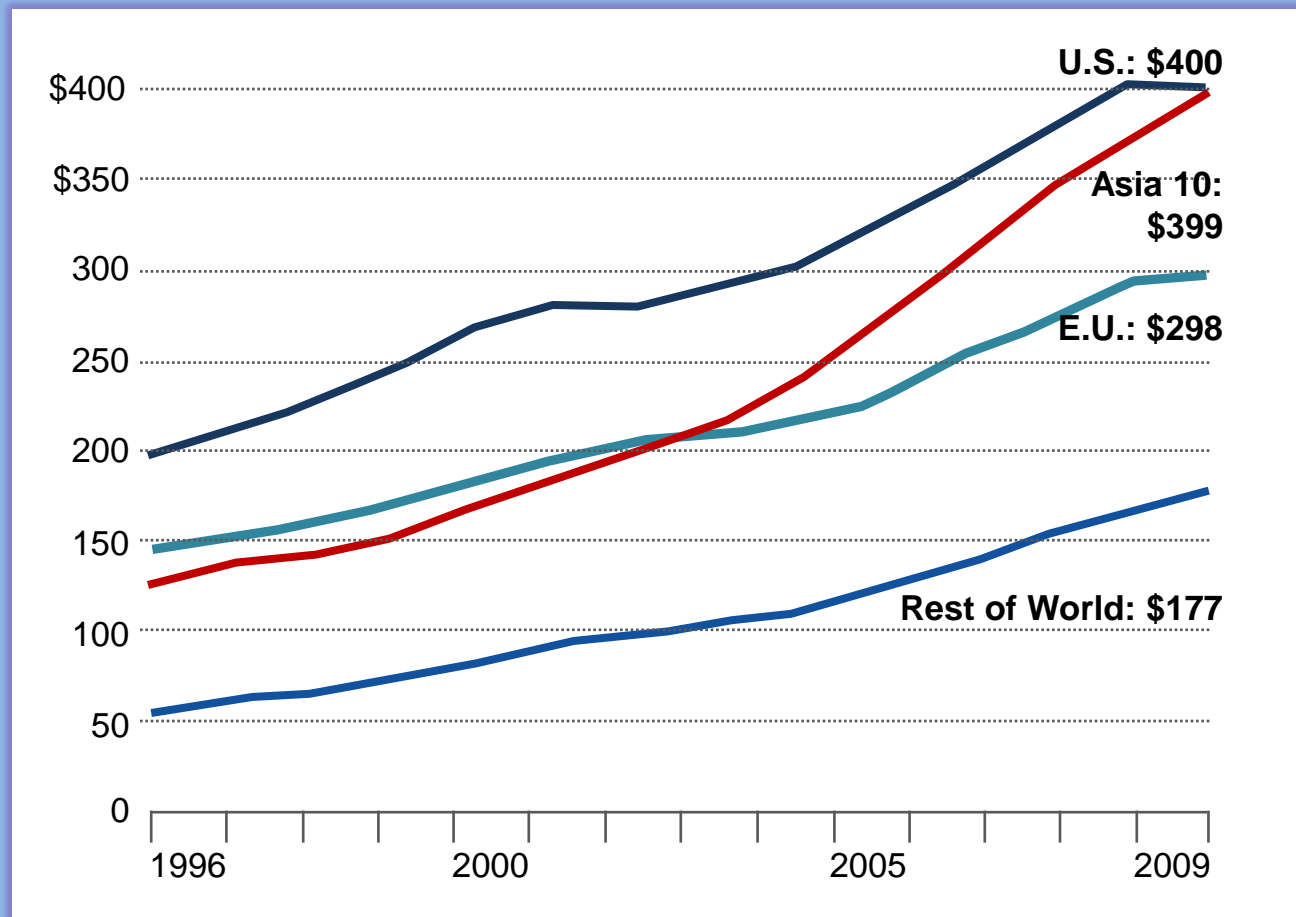

“The scientific community benefits from diversity. Innovation, creativity, and novel discoveries are accelerated by a diversity of ideas and perspectives. While the scientific method provides a crucible for testing and validating these ideas, a diverse research community with many perspectives affords a rich environment for new theories and hypotheses.”

Schultz, P.W., et al. (2011). Patching the pipeline: Reducing educational disparities in the sciences through minority training programs. *Educational Evaluation and Policy Analysis*, 33 (1).

The Case for NSF Funding

Research-and-development expenditures,
In billions of U.S. dollars

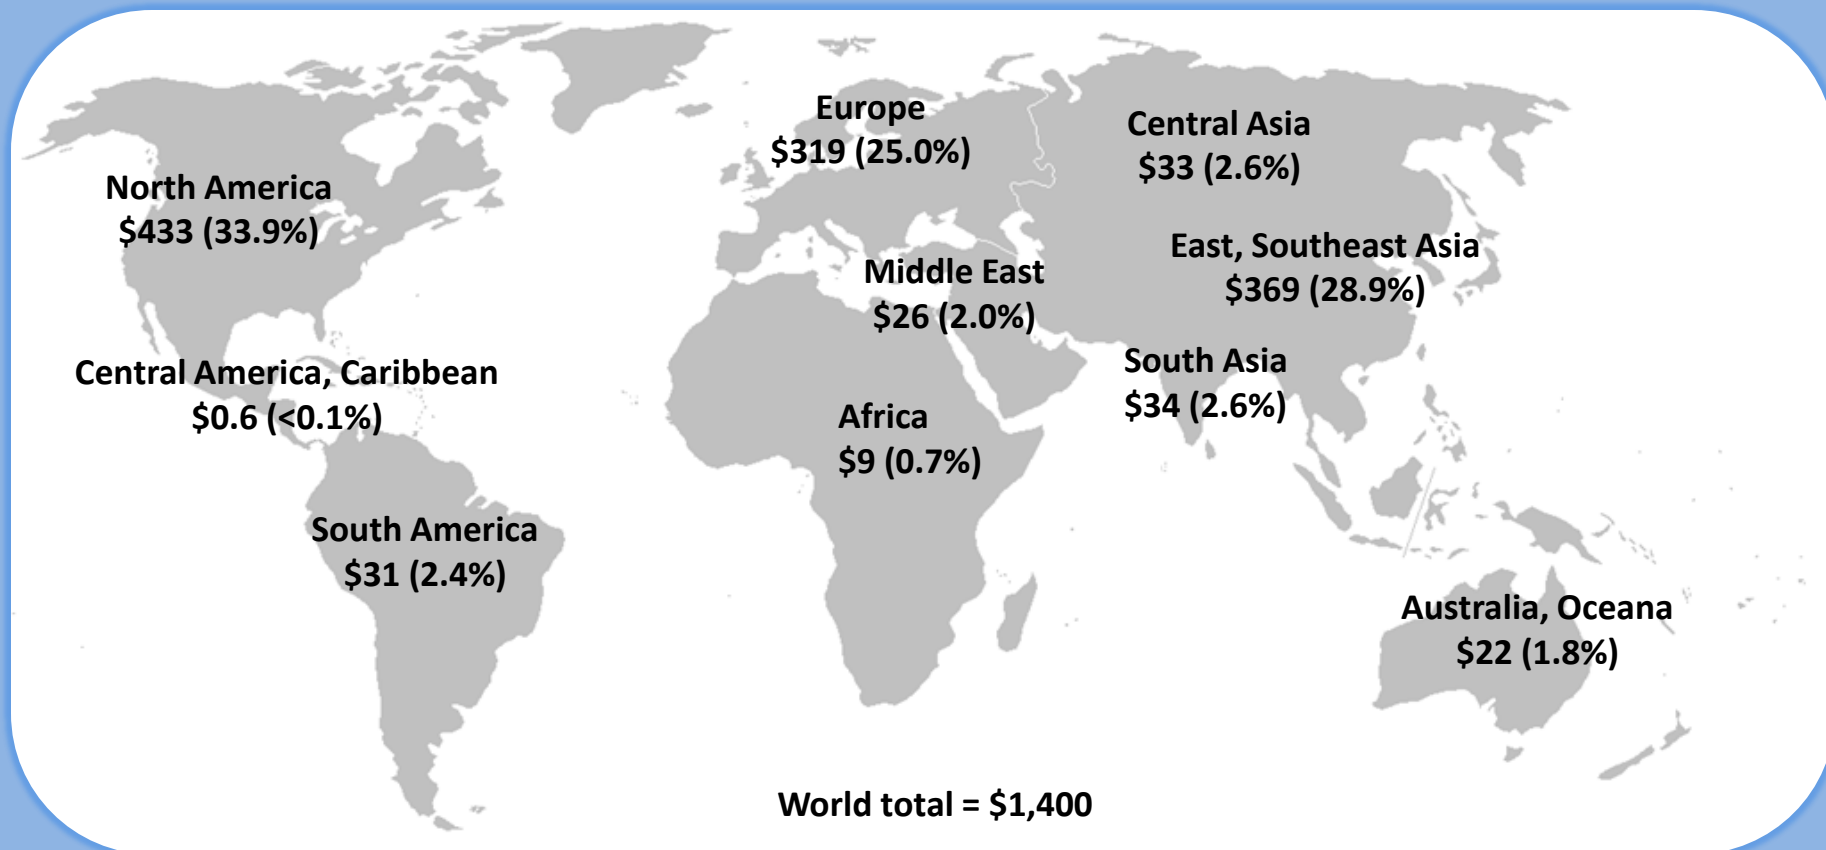

The Asia 10: China, India, Indonesia, Japan, Malaysia, Philippines, Singapore, South Korea, Taiwan and Thailand

Global R&D Expenditures and Share of World Total by Region

(Billions of 2009 U.S. Purchasing-Power-Parity Dollars)

The Big Picture

NSF FY 2013 Budget

TOTAL: \$7.373 billion

Increase: \$340 million

4.8% over FY 2012 enacted

2. WHY DOES NSF FUND EDUCATION?

“Basic scientific research is scientific capital...How do we increase this scientific capital? First, we must have plenty of men and women trained in science, for upon them depends both the creation of new knowledge and its application to practical purposes.”

Bush, Vannevar (1945) *Science: The endless frontier* (Washington, D.C.) accessed April 19, 2012 at <http://www.nsf.gov/about/history/vbush1945.htm#transmittal>

Science and Engineering Indicators 2012

FIGURE 4.6

Total job openings and educational demand by industry in 2018.

Source: Center on Education and the Workforce forecast of educational demand through 2018

Our students are not being prepared to meet the demands of a 21st-century workforce.

Carnevale, Anthony P., Smith, Nicole, Strohl, Jeff. (June 2010). *Help wanted: Projections of jobs and education requirements through 2018*. Center on Education and the Workforce, Georgetown University: Washington, DC., pg.71

The US trails much of the developed world in college attainment among young adults, a key measure of global competitiveness.

Source data and image prepared by OECD:
http://www.washingtonpost.com/local/education/playing-catch-up-in-college-completion/2011/09/12/gIQAegt6NK_graphic.html accessed September 12, 2011.

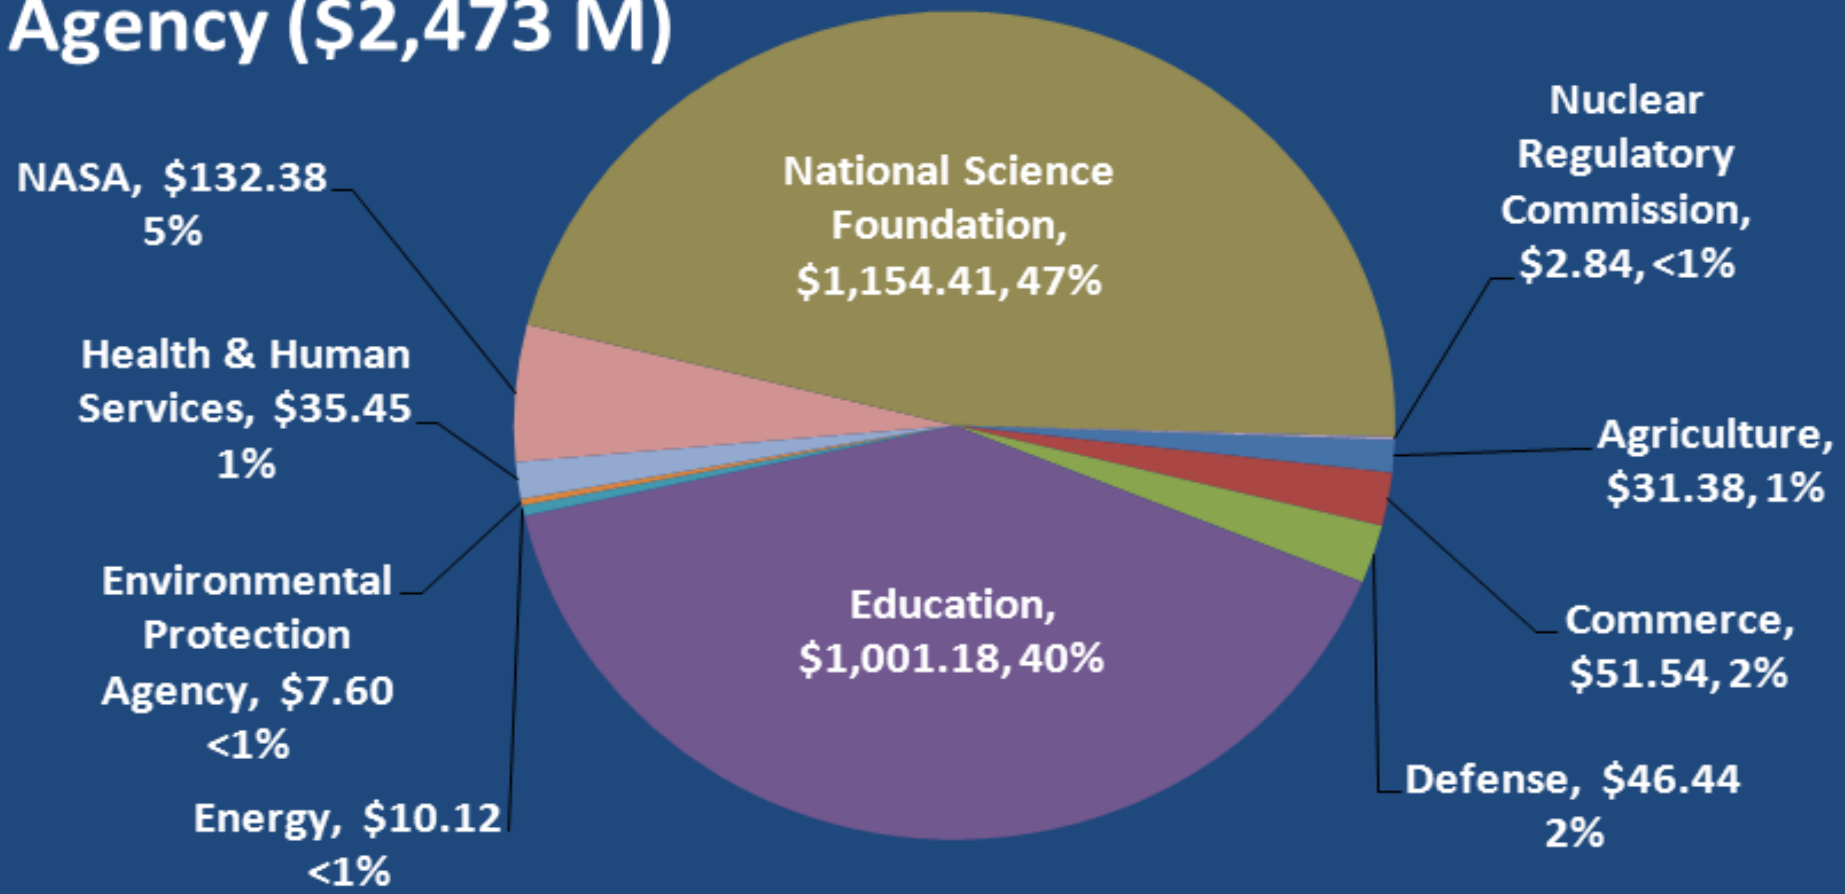

ISE PI MEETING,
MARCH 15, 2012

“In the United States, fewer than 40% of the students who enter college with the intention of majoring in a STEM field complete a STEM degree. Most of the students who leave STEM fields switch to non-STEM majors after taking introductory science, math, and engineering courses.”

PCAST, 2011, *Engage to Excel*, p. 5.

Funding for Broader STEM Education by Agency (\$2,473 M)

3. WHAT'S NEXT?

Discovery Research K-12 Program Strands

- Learning
- Teaching
- Scale-up and sustainability
- Assessment

A family participating in a workshop funded by the NSF project "Be a Scientist." Award #1008309, NSF *Informal Science Education* program.

Grand Challenges in Education: Driving Questions

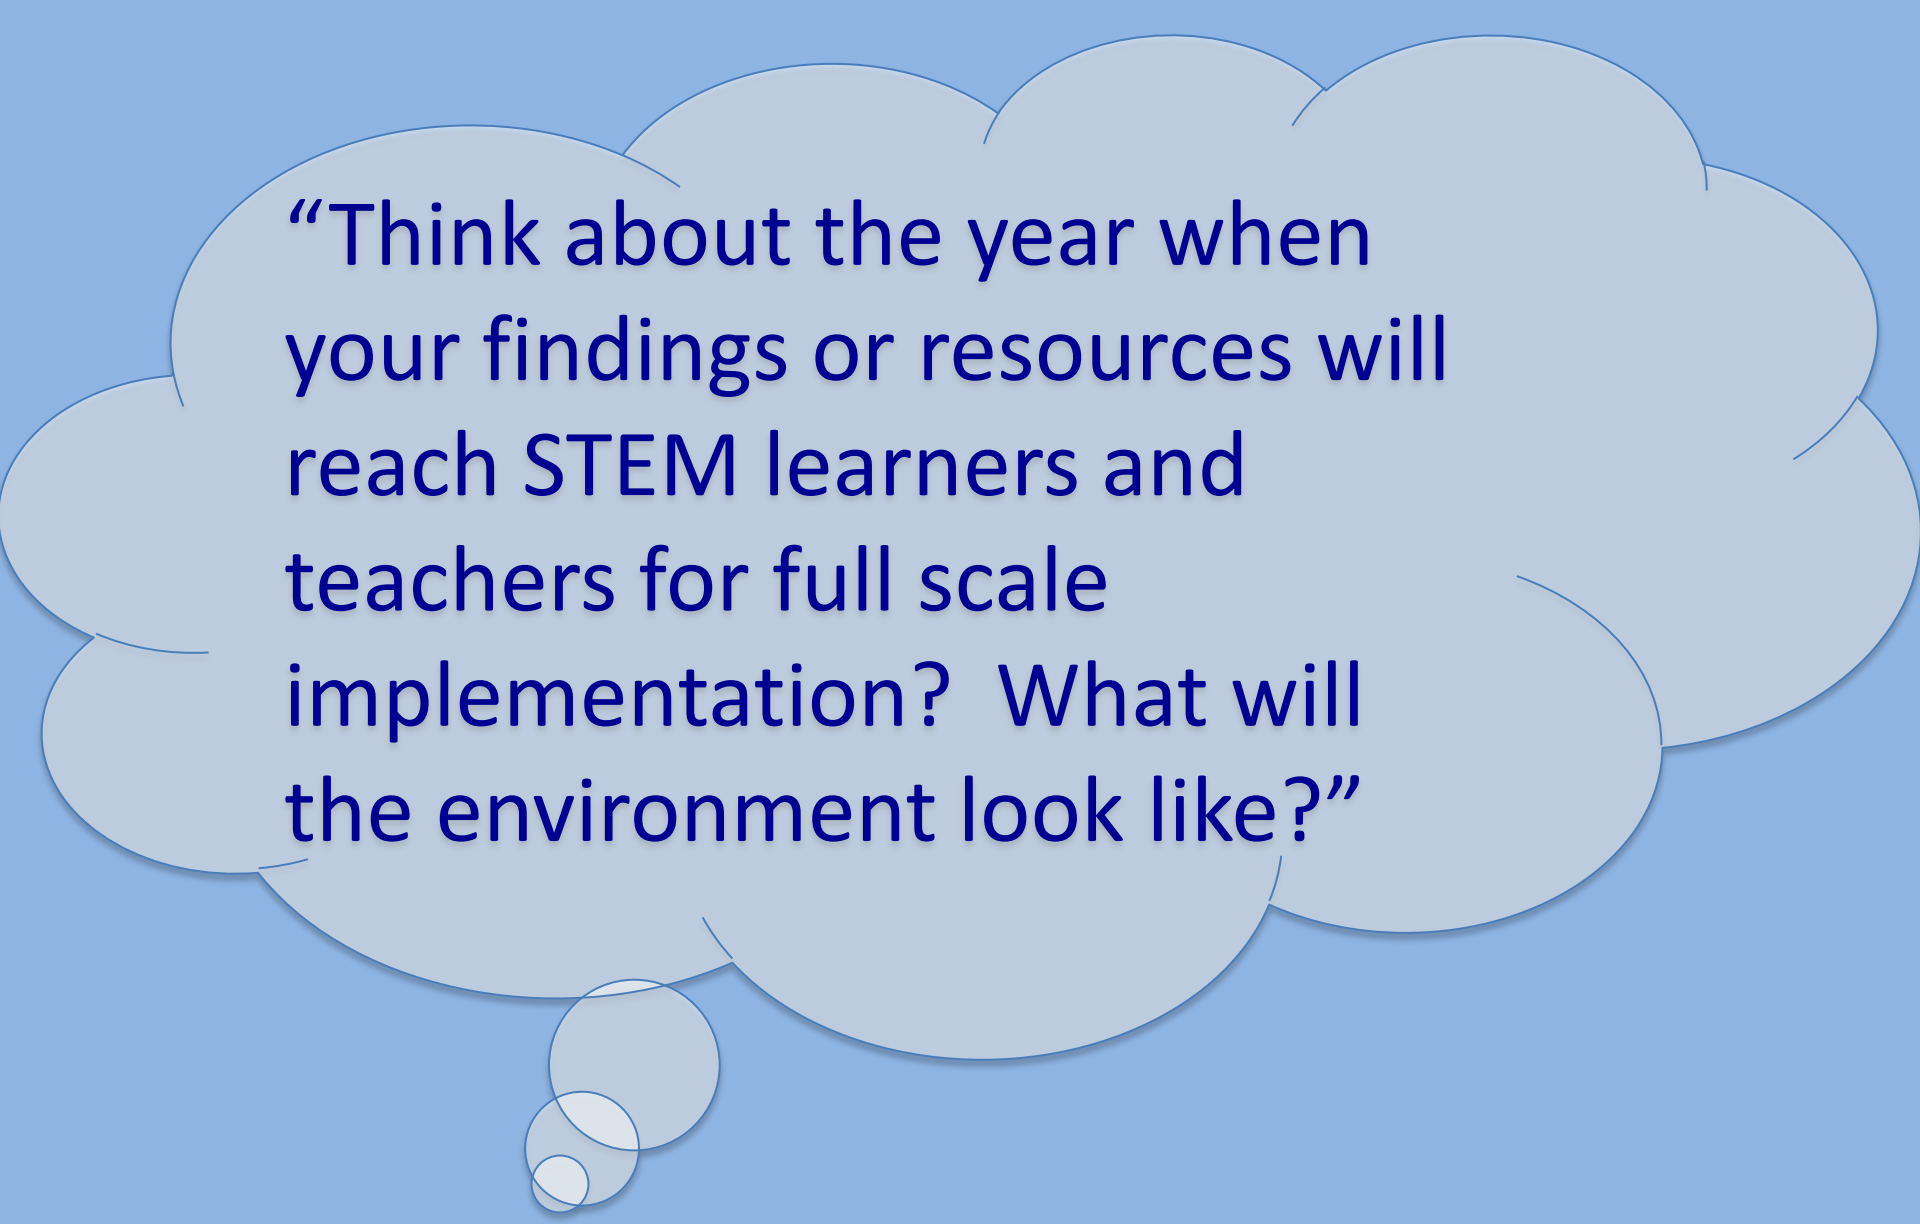

- How does the nation train and develop its science and engineering workforce?
- How should we teach and learn science in the 21st century?
- How does the nation create a science-literate citizenry?
- How can we broaden and deepen participation in science and engineering?
- How does NSF most effectively deploy its resources to transform the frontiers in STEM education and learning?

Disruptive innovation, a term of art coined by Clayton Christensen, describes a process by which a product or service takes root initially in simple applications at the bottom of a market and then relentlessly moves 'up market', eventually displacing established competitors. An innovation that is disruptive allows a **whole new population of consumers** access to a product or service that was historically only accessible to consumers with a lot of money or a lot of skill.

And....

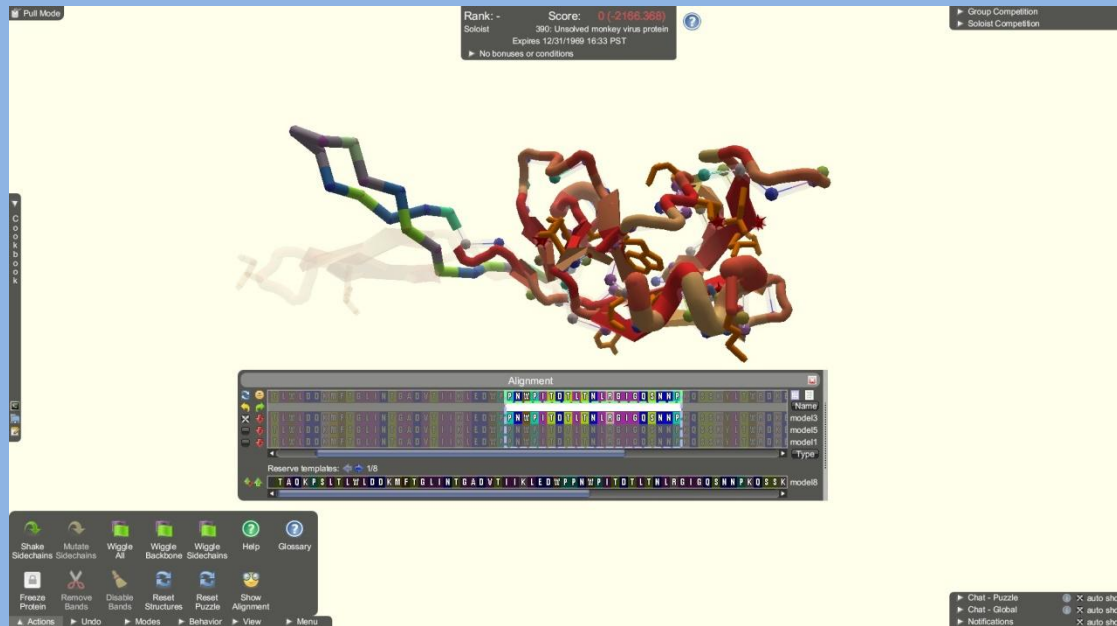

- Cyberlearning
- Lifelong/life wide learning
- New modes of research on learning
- New kinds and uses of data
- Data analytics
- Rapid-cycle improvement
- Citizen science to solve scientific problems
- Designing for scale

“Think about the year when your findings or resources will reach STEM learners and teachers for full scale implementation? What will the environment look like?”

Social Networks Solving Complex Problems

Networks of human minds are taking citizen science to a new level

In 2011, players of Foldit helped to decipher the crystal structure of the Mason-Pfizer monkey virus (M-PMV) retroviral protease, an AIDS-causing monkey virus. Players produced an **accurate 3D model** of the enzyme **in just ten days**. The problem of how to configure the structure of the enzyme had **stumped scientists for 15 years**.

The "unsolved monkey virus protein" Foldit puzzle, highlighting the tool used by online gamers. Credit: University of Washington

Expeditions in Education- E² *Engage, Empower, Energize*

- Make frontier science central
- Use theory and research on STEM learning
- Aim for bold learning outcomes
- Commit to common metrics
- Design for scale
- Involve all NSF directorates and offices

Expeditions in Education (E²)

Focus Topics for 2013:

- Transforming Learning for STEM Undergraduates
- Sustainability Science
- Cyberlearning and Big Data

| | |
|-----------------------------------|---------------------|
| FY 2013 Budget- NSF Total: | \$49 Million |
|-----------------------------------|---------------------|

| | |
|-------------------|-----------------|
| EHR Contributions | \$20.50 Million |
|-------------------|-----------------|

| | |
|--------------------|-----------------|
| R&RA Contributions | \$28.50 Million |
|--------------------|-----------------|

Innovation Corps (I-Corps)

Accelerating innovations from the laboratory to the market

Or....

evolutionary improvements?

Research & Development

Leadership & Capacity

Expeditions & Collaborations

- ✓ STEM Learning
- ✓ STEM Learning Environments
- ✓ Broadening Participation and Institutional Capacity in STEM
- ✓ STEM Professional Workforce Preparation

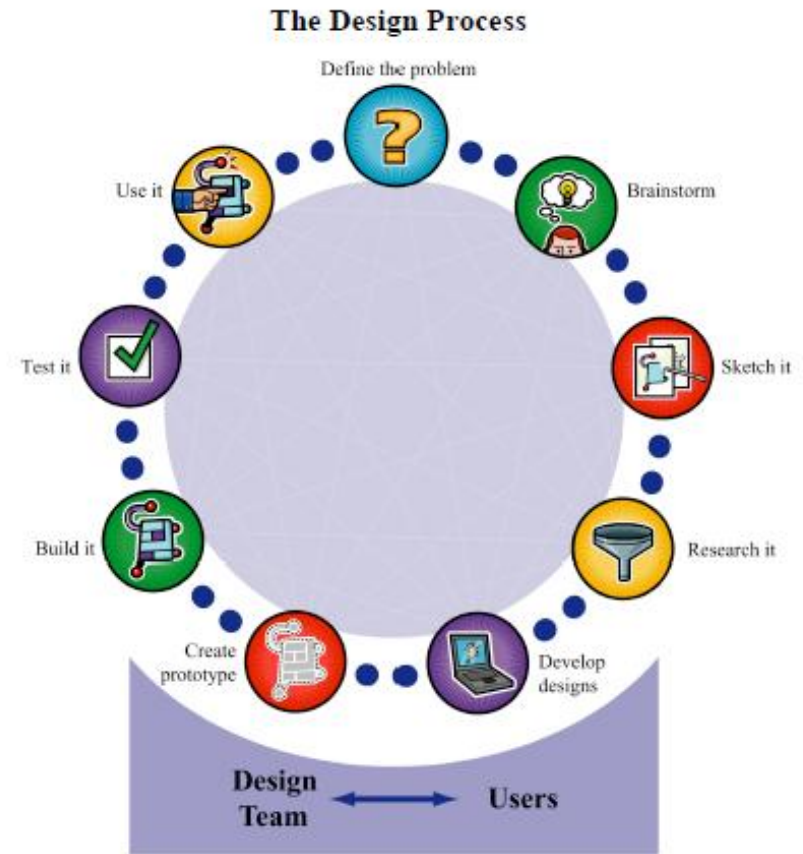

Challenges

- High quality evidence of impact
- Use of NSF-funded resources at scale
- Effective partnering
- Telling the story of DRK-12 successes

Discovering What Works

“Knowing that a program *can* work is not good enough; we need to know *how to make it work* reliably over many diverse contexts and situations.

Anthony Bryk, President of the Carnegie Foundation for the Advancement of Teaching (2009), page 298 [as cited by Paul Cobb, February 2, 2012]

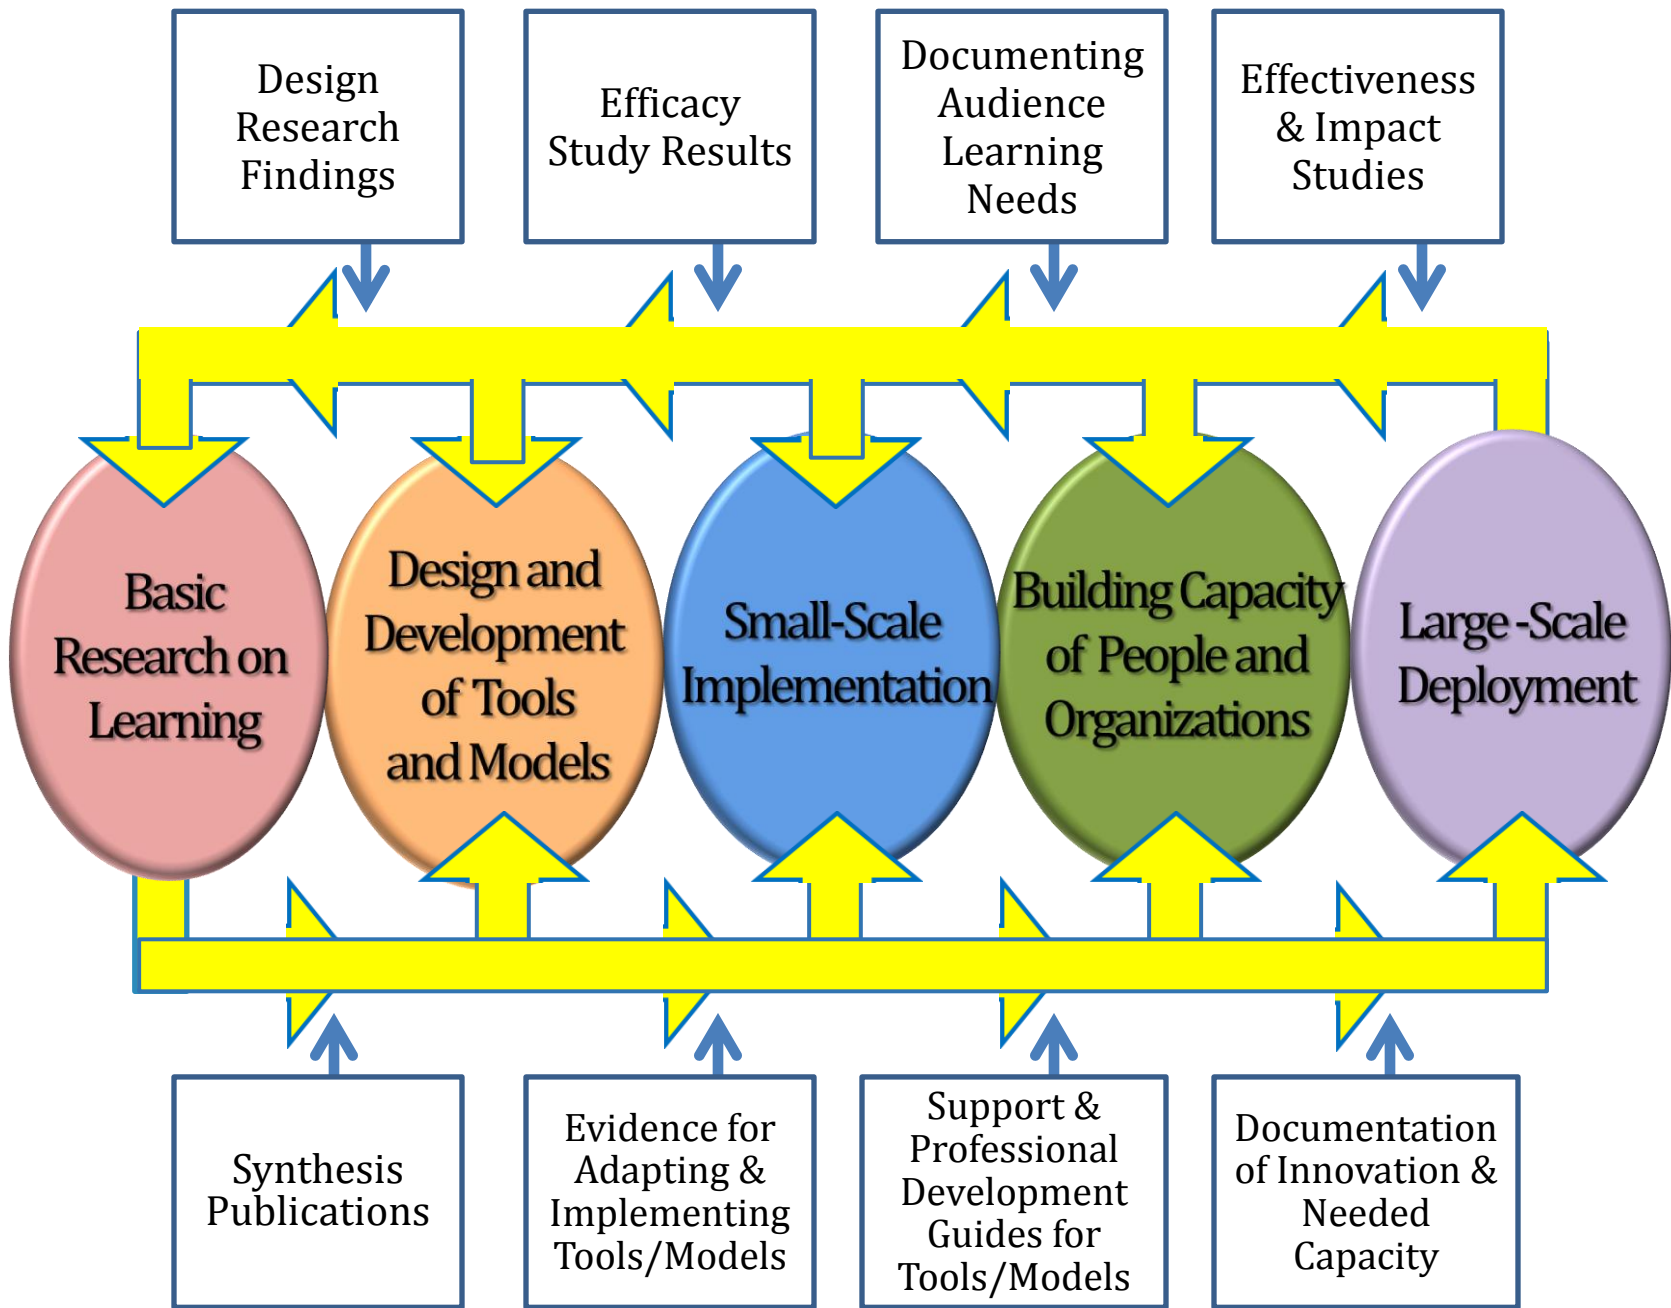

Build IT, a collaboration between Sri International and Girls Incorporated of Alameda County, is supported by the National Science Foundation's Information Technology Experiences for Students and Teachers (ITEST) program under Grant No. ESI-0524762.

Figure 1. The Design Process poster used in the Build IT curriculum.
