

# Infusing Engineering into Secondary Level Classes

Projects INFUSE &  
INSPIRES

**Rodney L. Custer, Black Hills State University**

**Jenny L. Daugherty, Purdue University**

**Jon Singer, University of Maryland, Baltimore County**

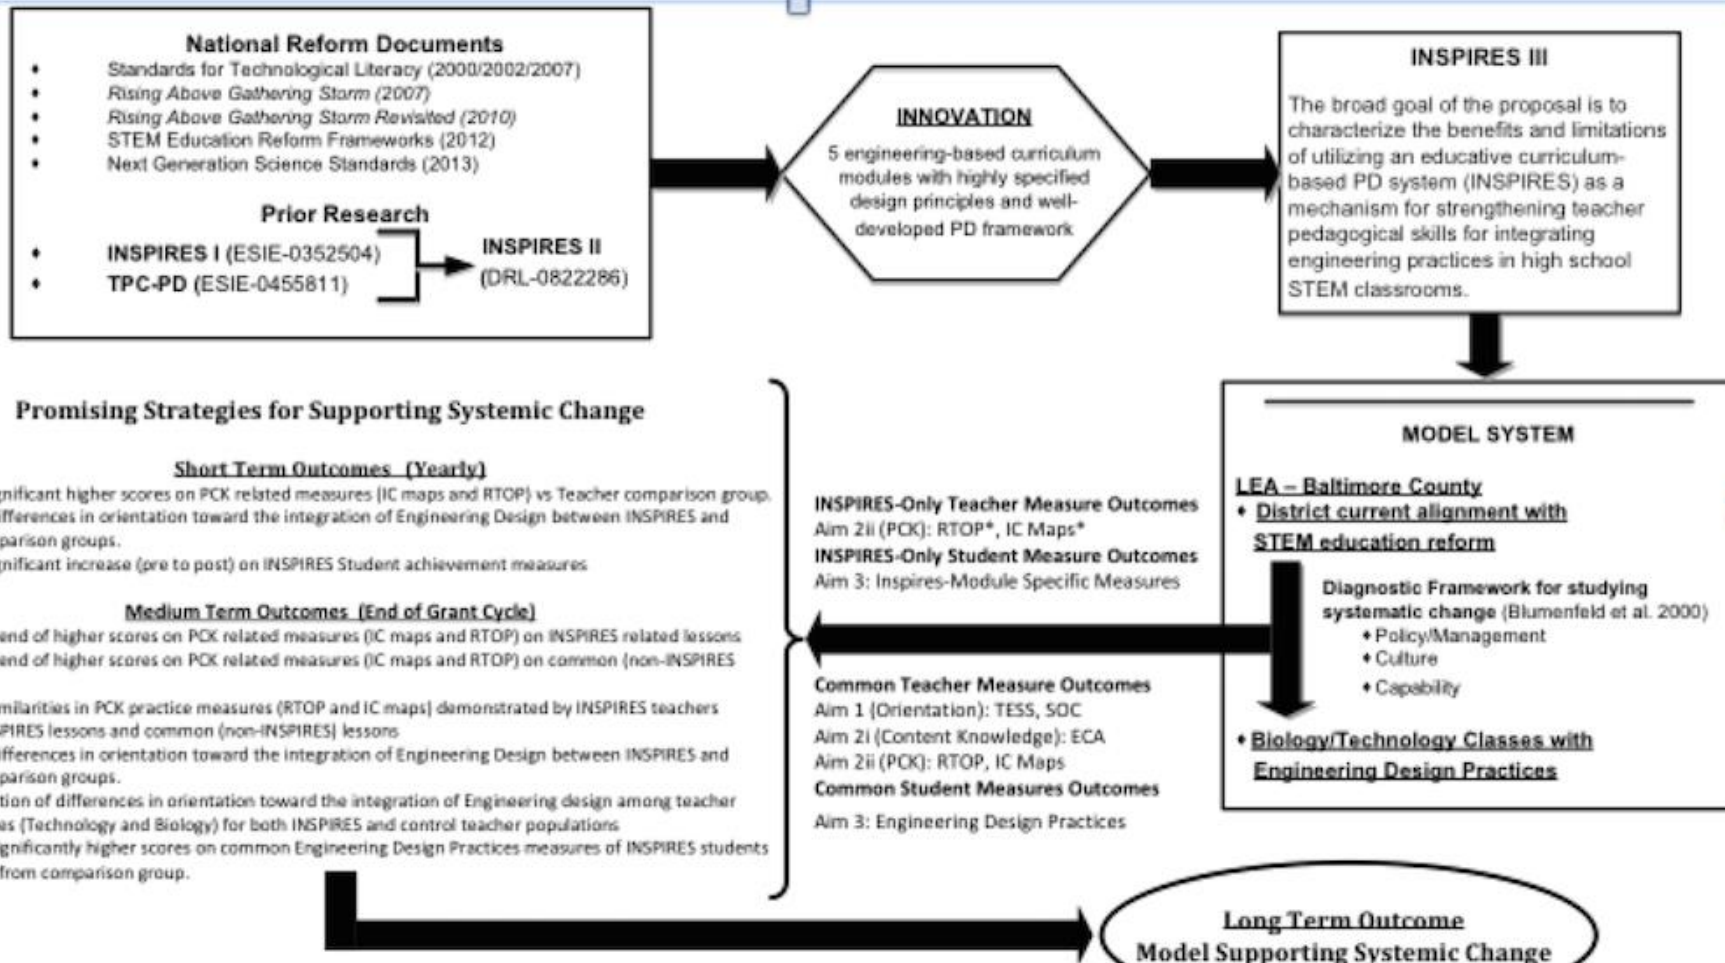

# Context & Background

## INFUSE

- ◆ Experience with National Center for Engineering and Technology Education
- ◆ Interest and background with the engineering component of the NGSS
- ◆ Examine possibilities of synergizing engineering and science
- ◆ Desire to develop a concept-based approach to engineering in science
- ◆ Other Project Team Members:
  - ◆ Julia Ross, University of Maryland, Baltimore County
  - ◆ Arthur Eisenkraft, University of Mass, Boston
  - ◆ Kathy Kennedy, Stevens Institute of Technology
  - ◆ Karen Peterman, evaluator

# Context & Background INSPIRES

# Overview

- ◆ Both projects have same goal: *to enable teachers to infuse engineering into science*
- ◆ Project Infuse goal:
  - ◆ To understand how science teachers learn engineering concepts through a **concept-based** professional development program.
- ◆ Inspires goal:
  - ◆ To characterize the benefits and limitations of utilizing an educative curriculum-based PD system (INSPIRES) as a mechanism for strengthening teacher pedagogical skills for integrating engineering practices in high school STEM classrooms.

# INFUSE Selected Research Questions

- ◆ What gains can be achieved in **science teachers' understandings of engineering concepts** as a result of using the Project Infuse professional development model?
- ◆ What **core components are effective** for improving science teachers' understanding of engineering concepts through the professional development process?
- ◆ Is there a relationship between teachers' understandings of engineering concepts and their **willingness and perceived ability to infuse engineering** into science lessons?
- ◆ What are the **differences and similarities in life science and physical science teachers'** understandings of engineering concepts, their ability to infuse engineering concepts into their science lessons, and progress through the stages of concern?

# INSPIRES Research Questions

**Aim 1.** To characterize teacher attitudes, beliefs and concerns associated with integrating engineering practices and core ideas in high school Biology and Technology Education.

**Aim 2.** To assess teacher content knowledge and pedagogical skills associated with integrating engineering practices and core ideas in high school Biology and Technology Education.

**Aim 3.** To correlate teacher knowledge of engineering and pedagogical skill level with student learning of engineering practices and core ideas and foundational science concepts as a function of STEM learning environment.

# Project INFUSE PD Strategies

- ◆ Core engineering concepts:
  - ◆ **Design** (constraints, tradeoffs, optimization, prototyping)
  - ◆ **Analysis** (life-cycle, cost-benefit, risk)
  - ◆ **Modeling** (visualization, prototyping, mathematical models)
  - ◆ **Systems** (structure, functions, interrelationships)
    - ◆ *(Inspires is not including an explicit focus on systems.)*

# Project INFUSE PD Core Components

- ◆ Hands-on Design Challenges
- ◆ Group-based Infused Lesson Development
- ◆ Reflections on Video-recordings
- ◆ NextGen Science Standards discussion
- ◆ Assessment Discussion
- ◆ Reflection Discussions
- ◆ Implementation issues analyses
- ◆ Pre-post Administration of the ECA, Stages of Concern Instrument, and effectiveness surveys

# INSPIRES PD Strategies

## Use of an Educative Curriculum (INSPIRES: *Engineering in Healthcare: A Hemodialysis Case Study*)

- ◆ Summer Professional Development Institutes
  - ◆ STEM Content Practices
  - ◆ Experienced materials as “students”
  - ◆ Reflection on lesson design and instructional strategies
  - ◆ Logistical support
- ◆ Enactment of the Curricular materials
  - ◆ First month of academic year
  - ◆ Video tape targeted lessons used in monthly “lesson study”
- ◆ Monthly “lesson study” sessions
  - ◆ Video segment reflective critique
  - ◆ Plan - Do-Study-Act (Collaboration-Enactment-Extended Reflection)

# INSPIRES Curriculum

Design Principle	Example Strategies
Context:	<ul style="list-style-type: none"><li>▪ Initial video</li><li>▪ Design Challenge</li><li>▪ “Just in time” content</li></ul>
Standards Based:	<ul style="list-style-type: none"><li>▪ Alignment charts</li><li>▪ Pre/Post achievement measures</li></ul>
STEM Practices:	<ul style="list-style-type: none"><li>▪ Inquiry- and Design- based activities</li><li>▪ Argumentation</li><li>▪ Models/Simulations</li></ul>
Collaboration:	<ul style="list-style-type: none"><li>▪ Inter and intra student group sharing</li><li>▪ Think, Pair, Share</li></ul>
Public Artifacts:	<ul style="list-style-type: none"><li>▪ Daily artifacts of key ideas</li><li>▪ Design Loop</li><li>▪ KWL posters, Target Poster</li></ul>
Metacognitive:	<ul style="list-style-type: none"><li>▪ Design Notebook set-up</li><li>▪ Targeted discussions emphasizing rationale for design decisions</li></ul>

# Overlap Between the Projects

- ◆ **Both included Biology Teachers**
  - ◆ Infuse: biology and physics teachers
  - ◆ Inspires: biology and technology teachers
- ◆ **Engineering Concept Assessment**
  - ◆ Pre and posttest to measure understanding of engineering
- ◆ **Engineering Lesson Rubric (IC Map)**
  - ◆ Professional development tool
  - ◆ Video assessment instrument

# Engineering Concept Assessment (ECA)

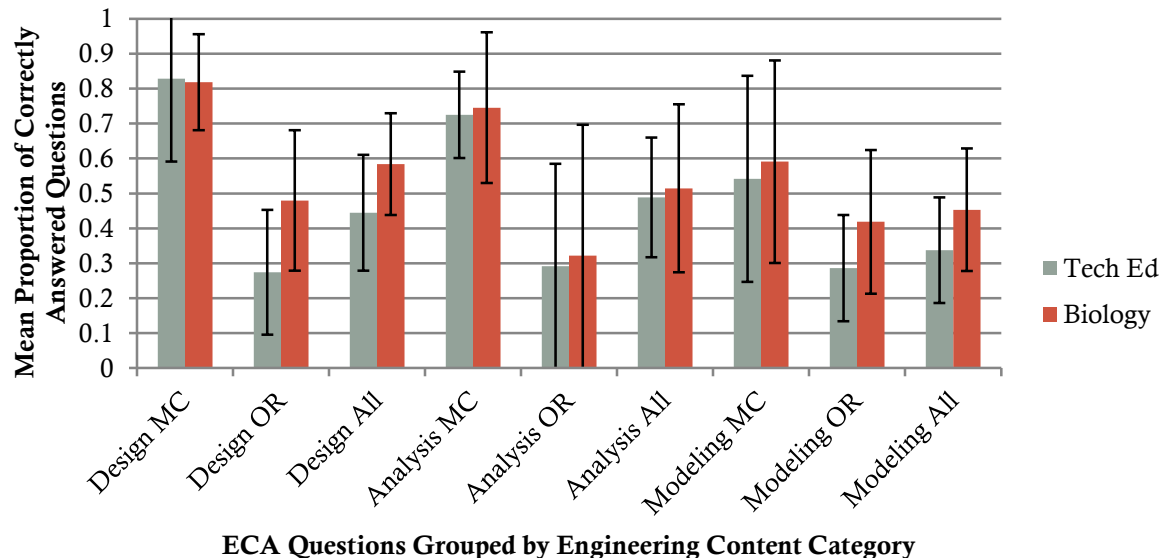

- ◆ Background and Goal
- ◆ Major development steps:
  - ◆ First a test framework was developed, grounded in definitions and specifications of engineering concepts.
  - ◆ Item development followed an iterative process beginning by developing 50% more items than will be needed for the final version. The goal was to have 6 items for each of the 4 engineering concepts that range across Bloom's taxonomy levels.
  - ◆ A pilot test version was administered to the pilot test teachers during the institutes. Item discrimination values were computed which led to extensive revisions to the instrument.

# ECA - INFUSE

- ◆ Teachers scored higher on the Multiple Choice items than on the Constructed Response items
- ◆ Modest gains from year 1 to year 2
- ◆ Physics group tended to score somewhat higher, but differences were modest and not statistically significant
- ◆ Of the 4 concepts (design, analysis, modeling, systems), the scores for design were significantly higher than for the other concepts

# ECA: Inspires

- ◆ Piloted via online survey with NSTA listserv members
- ◆ Base-line conducted during day 1 of initial summer PD
- ◆ Post-test data to be collected during day 1 of summer PD #2

# Engineering Lesson Rubric

- ◆ Background and Goal
- ◆ Process:
  - ◆ Generated a list of major components representing engineering infusion including design-based curriculum materials and teacher practices.
  - ◆ Developed sub-components and descriptions across a spectrum of ideal implementation to marginal implementation.
  - ◆ Collectively, this process yielded a set of thick descriptions structured within a well-developed conceptual implementation framework.

# ELR: INFUSE

- ◆ Professional Development tool
  - ◆ Was used to guide critique of existing lessons as an activity in the PD
  - ◆ Was used to inform observation protocol to capture snapshots of the components that happen in the classroom
- ◆ Lesson study (in progress)
  - ◆ The purpose of the study was to investigate the utility of the rubric to document the quality of engineering lessons for high school students.
  - ◆ A total of 171 lessons (63 Biology and 108 Physics) have been identified online using a set of criteria that are in the process of being evaluated and coded using the rubric

# ELR: INSPIRES

- ◆ Assessment Tool measuring changes in classroom practices
- ◆ Used in conjunction with RTOP
- ◆ 4 lessons observed and coded per teacher participant
  - ◆ Baseline, 2 INSPIRES, Transfer
  - ◆ Repeated during years 2 and 3
- ◆ Comparisons to be made both among sub-populations (Bio and Technology) and with “control” population

# Reflections INFUSE Preliminary Findings

- ◆ Importance of Curriculum and Lessons
- ◆ Value of ELR/IC Map
- ◆ Overall strong support for an engineering-based approach for both biology and physics teachers
- ◆ Value of including engineering-technology teachers in the process
- ◆ Difficult to develop valid and reliable direct assessment measures of engineering concept understanding

# Reflections INSPIRES

## Year 1 Accomplishments

Accomplishment	Description
Participant Recruitment	39 Teachers (23 bio, 16 tech) in 13 HS 46%female, 54%male and 77%white, 23% persons of color.
Baseline Data	Teachers were provided a uniform prompt to enact a 90 minute lesson that targets an aspect of NGSS ETS-1 Engineering Design. In addition, teacher were also given the <i>Stages of Concern (SOC)</i> and <i>Teaching Engineering Self-Efficacy Scale (TESS)</i> surveys and the <i>Engineering Concept Assessment (ECA)</i> . Data and video analysis are underway.
Enactment Data	Classroom video collected and assessed using <i>Reformed Teaching Observation Protocol (RTOP)</i> and <i>Innovation Configuration (IC)</i> map tools for baseline and 2 distinct INSPIRES lessons. “Transfer task” (non-INSPIRES lesson similar to baseline) is currently being collected.
Student Data	Student achievement (INSPIRES Pre/Post data has been collected – analysis are underway

# Reflections INFUSE Preliminary Findings

- ◆ **Identifying appropriate and engaging lesson ideas for the biology area**
- ◆ **Developing a valid and reliable content-based assessment tool for the engineering concepts (ECA)**
- ◆ **Aligning professional development with the ECA assessment tool**
- ◆ **Maintaining a focus on engineering concepts throughout the PD (rather than allowing activities to drive the process)**
- ◆ **Helping science teachers understand how to engage students in open-ended, multi-solution activities (what design process looks like)**
- ◆ **How to use engineering design-focused lessons to deliver and reinforce science content (rather than an engaging add-on)**

# Reflections INSPIRES

- ◆ Navigating the System
  - ◆ Commercial venter vs. University research
  - ◆ Recruitment and Permissions
  - ◆ Communication between and among stakeholders
  - ◆ Enactment placement
  - ◆ Time vs. Standardized testing
- ◆ Messaging
  - ◆ Curriculum vs. Professional Development
  - ◆ Curriculum vs. Transfer
